- ① Milky White PC Diffuser ② LED Tape Light(not included) ③ End Cap with Hole
④ Mounting Clips ⑤ Aluminum Channel ⑥ Screw

1. Make Preparation

Clean and dry the surface where the channels need to be fixed and measure the length to confirm how many channels will be need.

2. Fix Mounting Clips

Fix the mounting clips with screw to your desired surface, or you can use strong adhesive double-sided tape(not included) to fix the channels.

3. Install Channel Track

Insert aluminum channel track to the fixed mounting clips or stick it to the surface with your strong adhesive double-sided tape. For customized length, use a hand saw or air saw to cut the channel as required.

4. Put LED Tape In

Peel back the paper backing and stick LED tape light into the channel track and press it to stick firmly. LED tape light is not included.

5. Cover PC Diffuser

Snap or slide in the milky white PC diffuser to the top of the fixed channels to protect the tape light from external threat. Insert one edge of the diffuser into one side of the aluminum channel, snap and press another edge of cover into the opposite side of the channel, press the diffuser along with the channel. The diffuser is also cuttable for desired different lengths.

6. Install End Cap

20pcs end cap with hole are prepared for both blocking the hole in channel's end for power wire passing through.
