

## **SMARTTA SLIDERMINI INDIEGOGO CAMPAIGN STARTS WITH EARLY BIRD SPECIALS**

SAN FRANCISCO, AUG. 29, 2018 /PRNEWSWIRE-IREACH/--SMART VIEW is thrilled to announce the launch of its Indiegogo campaign for its new camera slider, Smartta SliderMini, at 1 p.m. GMT. on Aug. 29, 2018. Customers who want to buy SliderMini have a chance to win a limited 50% off retail at the price of \$199 when the campaign begins. Please visit the link to join the campaign directly: <https://igg.me/at/SliderMini/>.

Smartta SliderMini is a motion-controlled camera slider system that is specially designed with the concept of ultra smooth motion, thinner size, lightweight unibody and rich features. It is an affordable camera gear which is pretty easy to use. Users can control the direction of SliderMini manually by pressing the button on its body, or customize the motion, speed, direction and long exposure time-lapse for each shot wirelessly by Smartta Go app, which is available on both [Android](#) and [iOS](#) phone system.

As a mini camera slider, SliderMini features a long gliding path(8 inches) with up to 33lb horizontal payload capacity. Due to its thin size and unibody design, SliderMini is portable enough to fit in a backpack (even in a pocket) when travelling. As John Aldred, a photographer as well as an editor on DIY Photography, commented "An interesting slider. I really quite like it so far. Very handy for vloggers and others who regularly travel with a camera."

To satisfy various shooting needs, SliderMini helps anyone who uses a smartphone, camera or DSLR capture smooth cinematic moments in different ways. Both Time-Lapse and Stop Motion are one-touch features that enable users to create their own optimal video. There are ten built-in modes for users to choose in Smartta Go time-lapse library. Users can apply any mode among the ten, or customize their own time-lapse library in seconds. Night lapse is the most favorable mode for users to capture professional night shots. While Stop Motion is surely the perfect solution for users to create stop motion animation in their movies, films or videos.

"In order to provide our early backers with a perfect slider, our team make persistent efforts to improve SliderMini to be smoother before our crowdfunding campaign," says Neil Wang, Product Manager at Smart View, a videographer himself as well. "Here we want to show our appreciation to professional photographers and editors who have used our product and have sent their precious suggestions to us. We will continuously optimize every aspect of our slider in the future. "
